

GlengarryHats.com Short Tunic Measurement Advice

Take these measurements while wearing your kilt, a good fitting dress shirt, and the belt you will be wearing on the outside of the tunic.

NECK

Puff out your neck to it's maximum size before measuring. Collar will be cut 1" larger than provided measurement to ensure your collar will be comfortable in all conditions.

CHEST

Measure chest circumference under arms at largest point. Chest will be cut about 1" larger than provided measurement.

WAIST

Measure waist circumference over your kilt at the level you will be wearing your belt on the outside of the tunic. Waist will be cut about 1" larger than provided measurement.

HIP

Measure hip / seat circumference over your kilt at the level of the tunic bottom hem.

FRONT LENGTH

Measure from the base of your collar to the bottom of your belt while wearing the belt at the level you will be wearing it on the outside of the tunic. Your belt level on the outside of the tunic may be different that when wearing your belt with kilt and shirt alone. Note the tunic collar is generally somewhat looser than a tighter fitting dress shirt collar, and may fit up to 1 inch lower. The belt hooks will be installed at this level.

BACK LENGTH

Measure from the base of your collar to the bottom of your belt when the belt is worn at the level you will be wearing it on the outside of the tunic.

SLEEVE

Measure from top seam where shirt arm attaches to your shirt body over bent elbow to the desired cuff length. Note cuffs normally "ride up" a little when bending your arm, so it is important to measure with a bent elbow to get desired wrist coverage when bending your arms while wearing your tunic. Compare with same measurement from a good fitting suit jacket.

SHOULDER WIDTH

Measure from shoulder seam to shoulder seam while wearing a good fitting dress shirt.
